

IRISH TAR

BRINGING QUALITY TO THE SURFACE

SARFLEX (C72BP3)

Sarflex is a **Super Premium Polymer** modified cationic bitumen emulsion. Its principal application is for surface dressing of sites where binders with a range of exceptional characteristics are required.

ADVANTAGES OF SARFLEX

- Rapid breaking to enable early trafficking.
- Better retention of road texture.
- Greater durability/longer life.
- Better textured mosaic.
- Higher tenacity/greater resistance to scrubbing.
- Much greater tolerance to extremes in road temperatures.
- High polymer content giving excellent cohesion values.
- High softening point.

Sarflex is ideally suited for use with surface dressing techniques such as 'double dressing', 'sandwich dressing', 'racking in', 'inverted' and 'multiple layer dressings'.

Sarflex has enabled the Roads Engineer to specify surface dressing on sites that previously would have required overlay treatments.

Sarflex complies with The NRA Binder Specifications: RC 380/13 Table 1.

Recommended Temperature:

Storage 75 to 85°C

Prolonged Storage 60 to 70°C.
